Project Title: Frogs Website

I plan to build this website as one long page that is divided into content sections. I hope to use the navigation bar to allow the viewer to jump to specific sections. I hope to include lots and photos and diagrams to provide visual aids for the viewer. My intent with this website is to provide informational facts for the viewer to learn more about frogs but designed in a visually appealing and related way to the topic to make learning this info more fun than reading a science textbook.

- Introduction: Give a basic overview of these animals. Include some surface level information on them such as how many different species there are, amphibians, etc.

- Habitat: Different places frogs live/different ecosystems.

- Life Cycle: How frogs develop, the different stages of their life, avg frog lifespan, etc.

- Mating: How frogs attract mates, about their ribbits/calls

- Defense: The various ways frogs have adapted to fend of predators

- Sources: will be a section at the bottom listing my sources
